

The screenshot shows the Charles 4.6.3 interface with the 'Proxy' menu highlighted. The 'Throttle Settings' dialog is open, showing the 'Enable Throttling' checkbox checked and the 'Add' button highlighted. The 'Edit Location' dialog is also open, showing the 'Host' field with 'https://' entered and the 'OK' button highlighted. Red arrows and text boxes provide numbered instructions for each step.

1. click Proxy

2. in the drop-down menu click Throttle Settings

3. click Enable Throttling

4. click Add

5. input your host

6. click OK

7. select the desired settings

8. click OK

Throttle Settings

☒ Enable Throttling

☒ Only for selected hosts
